

BrikkApp

International real estate
investments marketplace.

Praha, Czech Republic

Pre-seed company established in **2017**

Teaser of the company

BrikkApp is building the world's first property investment aggregator & marketplace that enables direct buying and selling from just few hundred EUR.

BrikkApp's vision is to allow our customers to access verified & trustworthy information about platforms all across the world, select the best deals and buy and sell investments all in one dashboard.

PEERBRICK

Madrid, Spain

Blockchers Use Case Scenario

BrikkApp will implement the following use case scenario

End User SME

Our use case revolutionises the online property investment world by creating a decentralised marketplace where investment opportunities are traded. We build a network of various online property investing platforms, make the crowdfunding process more efficient for all the end-user SMEs by allowing them to cut down crowdfunding costs, bring them new users and facilitate bigger deals. BrikkApp blockchain is a network of the individual real estate platforms, which all share a database of verified transactions, users, and platforms.

- Secure solution for immediate primary and secondary trading, which eliminates a potential double spending problem.
- Transparent way of saving data about the success rate of the investment opportunities.
- High level of trust – each real estate platform acts like a node in the network and validates and maintains a copy of the necessary data.
- No central authority – once the platform is accepted to join the network, there is no single super admin who could manipulate the data.

Secure payments distribution (of users earnings).

Team making BrikkApp great
