

# JOIN

Bringing people together  
and you building the best  
possible teams

**Berlin, Germany**

Seed company established in **2018**

## Teaser of the company

Solutions for internal and cross-company communication & collaboration.

In today's economy, various platforms provide infrastructures for digitization activities to improve cross-company collaboration. These infrastructures require the collection of data about the ins and outs of such collaboration processes, often by one of the collaborators or even an external third party.

The lack of individualization of processes and missing trust in view of data security results in objections against such services.

In addition, there is no paradigm on how to create trustful, individual, cheap and scalable digital processes for exchange of process relevant data in value creation networks. This makes it impossible to resolve the high inefficiencies in daily cross-business collaborations.

trust

## Blockchers Use Case Scenario

**JOIN GmbH will implement the following use case scenario**

### End User SME

Industrial scales are currently not digitized and checking the accuracy of their measuring results often leads to manual effort and high process costs.

We want to equip industrial scales with a decentralized identity on blockchain basis, to transmit data in encrypted format to a smart contract, making it trustworthy and digitally accessible to all businesses, who rely on the weighing results. Additionally, a digital certificate can be attached to the identity of the scales by auditors.

**Notes:**

**Team making JOIN  
GmbH great**
