 CHAINSTEP

CHAINSTEP 

Teaser of the company

CHAINSTEP brings blockchain to the real economy. CHAINSTEP remains at the bleeding edge of technology though its endeavors in R&D and close cooperation with DLT-infrastructure providers.

Our clients ask us to accompany them on their digitalization journey and co-create blockchain based services or products with maximum real world impact. We do this by building bridges to the fascinating world of blockchain and help the economy to discover the capabilities, develop a decent strategy and accomplish a project based implementation.

We believe that the world cannot be changed if we work in an isolated way. We need collaboration. We offer a community to support organizations who want to innovate. A unique ecosystem of resources, inspiration and collaboration, sourcing from diversity to harness the full power of co-creation.

To foster the entrepreneurial mindset of our employees we run internal R&D with the focus to develop products and services within our incubator.

Blockchers Use Case Scenario

CHAINSTEP GmbH will implement the following use case scenario

End User SME

SigniChain offers blockchain-based end-to-end surveillance for art objects.

In combining sensor technology with DLT, SigniChain aims to provide reliable proof of proper handling and storage that can be used both by art logistics experts towards their clients as well as by collectors to help evaluating an artwork's condition for purchase or resale.

Collected data is signed directly on the sensor in order to prevent manipulation before the data reaches the blockchain.

Notes:
