

Φ Datafund

Transforming data into assets
on fair data principles

Ljubljana, Slovenia

Seed company established in **2017**

Teaser of the company

Information banking in fair data society. Datafund is transforming data into assets by connecting data owners with data users in a privacy centric and fair data way where:

- 1) data users get access to high quality data.
- 2) data owners reclaim their privacy, own their data and manage its value with the possibility of generating passive income.

Blockchers Use Case Scenario

Datafund will implement the following use case scenario

End User SME

Problem description: Law firms have a lot of correspondence and documents that require a specific way of transmission, to keep them private yet allow for confirmation of receipts of the documents.

Use case: Private, trust-less and decentralised storage of documents with encrypted receipts and server-less file transfer. This solution is integrated as part of lawyer office services (i.e. a white-label).

Notes:
